

## SMALL COMMERCIAL BUILDINGS

### WHERE WE STAND

The Small Buildings Initiative is a collaborative effort, relying not only upon the efforts of the Seattle 2030 District but those of our various partners.

This program provides expert hands-on help to building owners and tenant businesses in their efforts to reduce energy costs and improve the overall workspace. Some of the provided services include on-site energy assessments to determine energy-saving opportunities, help with the utility rebate process and identification of potential funding sources.

### WHERE WE'RE GOING

The Seattle 2030 District has set a target of a 20% energy reduction and now counting 29 participants in its portfolio, the program has been instrumental in the installation of six energy-saving projects as of September 2015 with another nine in various stages of implementation.

Small Commercial Buildings, generally considered under 50,000 square feet, account for the largest number of commercial buildings in the downtown core and typically have higher energy costs per square foot. The Small Buildings Initiative seeks to address this disparity through providing sector-specific tools and resources to Seattle 2030 District members.

### HOW WE'LL GET THERE

Currently, Seattle 2030's small commercial members have reduced their electrical usage by over 150,000 kWh per year. Early ongoing efforts are being rewarded as more projects are being implemented and new members are eager to join in the savings. Contact us today to find out how you can take advantage of this program and reduce your energy costs!
