

## Want to be a part of an Energy Dream Team?

Building off the success of last year's energy competition, the Seattle 2030 District is looking to our professional building community for viable solutions to an affordable housing building that will serve as a model for a clean energy future through exceptional building performance.

Teams will consist of an architect, engineer, general contractor, and a student pursuing a related degree. Through a partnership with local colleges, we are happy to match your team with an eager student; just let us know!

The teams will meet with the building owner/manager to learn specifics about the building, such as systems and any upgrades that have been recently implemented. Teams will have from September to October to work on innovative solutions to help the owner/manager increase decarbonization in their building to help meet new city and state building performance standards.

If you are interested in this unique opportunity and want more information, please contact Executive Director Daniel Poppe at [danielpoppe@2030districts.org](mailto:danielpoppe@2030districts.org).

### Timeline:

**June–August:** Recruitment of teams

**September–October:** Teams create energy improvement recommendations

**November–December:** Winner is announced and presents at an upcoming education forum

**Seattle 2030 District** is a membership organization of real estate owners, architects, engineers, contractors, and community partners that bridges the gap between the private and public sector to reduce the environmental impacts of buildings in Seattle. Our members have made the commitment to significantly reduce water and energy use, as well as pollution from stormwater and carbon emissions from transportation by the year 2030. The S2030D is a 501(c)(3) nonprofit organization.
