ABOUT THE SAN ANTONIO 2030 DISTRICT

Become a Member

The San Antonio 2030 District is one of many 2030 Districts in designated urban areas across North America, committed to reducing energy use, water use, stormwater runoff, and transportation emissions. Within this District, property owners and managers, local businesses, local government, utilities, and community stakeholders work together to benchmark, develop and implement creative strategies for measuring progress towards goals established by the Architecture 2030 Challenge for Planning.

Building Members form the core of the 2030 District. If you are a developer, building owner or manager with property within the District Boundaries, your primary contribution is a commitment to improve the performance of your building, starting with maintaining your electronic data portfolio. In return for District membership, the Building Members will receive multiple benefits including access to a wealth of information about improving building performance.

Professional Members contribute financially to the success of the District, and supply important resources to Building Members for improving building performance. Professional Members do not have to be located within the District to participate. For a minimum annual contribution, designated representatives of Professional Members may participate in all Member activities, as well as gain the opportunity to sponsor events and activities.

Community Members support the District through mutual advancement towards resource conservation and economic prosperity goals. Whether Community Members are located inside or outside the District, there are multiple ways to engage through in-kind support, collaboration, and outreach. Designated representatives of Community Members may participate in all Member activities.

The San Antonio 2030 District Map

I’m a founding member of the San Antonio 2030 District because I’m interested in real data, real case studies, what works and what doesn’t.

Laurence Seiterle
Zurich International Properties, Inc.

The San Antonio 2030 District would like to welcome the following featured members:
Weston Centre
General Services Administration
San Antonio Museum of Art
The Historic Pearl Brewery
City of San Antonio
