A GUIDE TO INCENTIVES IN SEATTLE

The Seattle 2030 District

is a groundbreaking high-performance building district in downtown Seattle that aims to dramatically reduce the environmental impacts of building construction and operations, while maximizing Seattle's economic viability and profitability for building owners, managers and developers.

INTRODUCTION

Seattle building owners are fortunate to have a wide array of incentives from major utilities available for energy and water-saving projects. Keeping track of these incentives and their applicability is a complex task. As a service to our members, The Seattle 2030 District has assembled this Utility Incentive Matrix, covering available incentives and resources from the following utilities:

- Puget Sound Energy
- Seattle City Light
- Seattle Public Utilities
- Seattle Steam

To use the matrix click the link below and select the section you are interested in from the list of tabs at the bottom. For more info on any incentive, click the link located in the “More Info” column. Use the contact information provided to get specific information on the project and to find out the full extent of the incentive.

INCENTIVES MATRIX

We hope that this tool is useful to our members and would appreciate any feedback to make the Incentive Matrix more informative. If you have any comments or suggestions please e-mail matthewcombe@2030districts.org.

* This matrix is current as of August 2013
